DAVID PRADO

Full Stack Engineer

London, ON | +1 (519) 872-5274 | davitprado@outlook.com | linkedin.com/in/davitprado | davitprado.com

PROFESSIONAL SUMMARY

Full Stack Engineer with 6+ years of experience, almost 4 of them on company teams. For the last 2, I've worked independently: I talk to the users, make the technical decisions and ship to production myself. That covers the architecture, data model, APIs and branded interfaces; I document why each solution is chosen, define specs before writing code, and ensure quality with automated tests. I work with TypeScript, React, Next.js, NestJS and PostgreSQL, plus generative AI pipelines. I've digitized manual processes across different domains: health and safety inspections with auditable offline records, meal management at a care residence, and automated image generation for e-commerce. Technical lead for the order module of a logistics platform processing 5,000+ shipments per day.

TECHNICAL SKILLS

Core stack: TypeScript, JavaScript, React, Next.js (SSR/SSG), Node.js, NestJS, PostgreSQL
Frontend: Vite, React Query / TanStack, PWA, Service Workers (Serwist), IndexedDB (Dexie), Tailwind, HTML5, CSS, Sass, Axios, webpack
Backend & data: REST APIs, GraphQL, Express, Prisma, Drizzle, MongoDB, Strapi, Socket.IO, Redis, BullMQ, pg-boss, Row-Level Security
Architecture: Offline-first (outbox pattern), modular monolith, monorepos (pnpm), immutable audit trails, Strategy pattern
AI & e-commerce: Generative AI integration, fal.ai, vision models, dynamic prompting, Shopify (GraphQL APIs, headless, metaobjects and metafields)
AI-assisted development: Claude Code, Codex, agentic coding workflows, spec-driven development
Testing: Jest, Cypress, integration testing
DevOps & cloud: Docker, Kubernetes, CI/CD, Git, GitHub, Bitbucket, Vercel, Railway, Render, Linux VPS
Quality & practices: WCAG, technical SEO, web performance (Lighthouse), Agile/Scrum, ADRs, Jira

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Independent) — Mar 2024 – Present

Self-employed | London, ON · Remote

Custom web systems and AI-powered products for small businesses and my own ventures, mostly replacing paper-based or manual workflows. Spec-driven delivery with AI coding agents (Claude Code, Codex) used daily: architecture decisions recorded as ADRs, specs before code, and integration tests in CI.

ClawPuzzle · AI personalization platform for Puzzle Salvaje, Ecuador — Aug 2026 – Oct 2026

- Built the technology for Puzzle Salvaje, a custom puzzle business with **5+ years** of operation and **thousands of units sold** in Ecuador, to launch a new line of AI-personalized wooden puzzles.
- Designed the personalization flow: pet photo upload, style selection, and AI-generated artwork ready for production with themed pieces, connected to the Shopify store through its GraphQL API.
- Adapted an in-house generation engine: redesigned the data model, removed **90+ obsolete files**, and merged two repositories into a monorepo while preserving Git history.

Stack: Next.js · React · TypeScript · NestJS · PostgreSQL · Prisma · fal.ai · Shopify · GraphQL

Offline Inspection System · Ontario Greenhouses, London, ON — Aug 2026 – Oct 2026

- Gathered requirements with Health & Safety and Human Resources to digitize inspections across two sites. Identified the lack of connectivity in the greenhouse as the reason the previous tool was abandoned.
- Designed and built, as the sole developer, an offline-first PWA for health & safety, maintenance, and electrical inspections, piloted with **~30 users**. It organizes work areas, assigns owners, and tracks each finding through to corrective action.
- Solved offline sync with the outbox pattern on IndexedDB and Service Workers. Implemented database-level immutability, per-site Row-Level Security, and hash-chained audit logs aligned with OHSA requirements.
- Documented the architecture in **12 ADRs** and applied spec-driven development (OpenSpec) with integration tests in CI.

Stack: TypeScript · React · Vite · TanStack · NestJS · PostgreSQL · Drizzle · pg-boss · Dexie · Serwist · Docker

Claw & Soul · AI Pet Art E-commerce — Technical Co-Founder Apr 2025 – Present

- Selected for the Fanshawe College Entrepreneurship & Innovation Program. Built end to end an e-commerce platform that turns pet photos into AI art and paint-by-numbers kits, and shaped technical and product decisions with a business partner.
- Designed an asynchronous AI pipeline with BullMQ/Redis: photo analysis with vision models, dynamic prompting, and generation with fal.ai. Implemented swappable art styles using the Strategy pattern.
- Integrated headless Shopify through its GraphQL APIs, modeling the product catalog, art styles and print formats with metaobjects and metafields.
- Created an in-browser paint-by-numbers generator: color reduction, segmentation, and SVG/PDF export, with a free preview at zero server cost.

Stack: Next.js · React · TypeScript · NestJS · PostgreSQL · BullMQ/Redis · fal.ai · Shopify · GraphQL

Meal Ordering System · Horizon Place care residence, London, ON Mar 2024 – Aug 2024

- Identified the need to digitize paper meal orders while working in the residence's dietary department, then designed and built a full-stack web application to replace them.
- Piloted the app with **60+ residents**, **14 tables**, and **two shifts**. Eliminated errors by displaying allergies, diets, and preferences in real time, saving **10–20 minutes per service**.
- Generated per-shift consumption logs and presented the solution to leadership, earning approval from the manager and the regional coordinator.

Stack: Next.js · React · Strapi · Socket.IO

Frontend Software Engineer (Contract) Nov 2024 – Feb 2025

Delphi (via Randstad) | Phoenix, AZ, USA · Remote from London, ON

- Migrated pages and components from WordPress to Next.js with SSR and SSG, as part of a migration that raised Lighthouse Performance from **45 to 90**, along with technical SEO and accessibility improvements.
- Integrated REST APIs with Axios and React Query for the vehicle parts catalog and store locator, optimizing caching and reducing redundant requests.
- Wrote unit tests with Jest and E2E tests with Cypress to ensure migration stability within a distributed Agile/Scrum team.

Senior Software Developer Jan 2022 – Aug 2023

Kruger Corp | Quito, Ecuador

- Technical lead for the order tracking module of Urbano, a logistics platform processing **5,000+ daily shipments**: the full lifecycle from customer creation to routing, delivery, and payment collection, within a three-developer team.
- Developed order, payment collection, and cash-on-delivery reconciliation services with NestJS and PostgreSQL, plus React and Vite views for customers and internal operations: collections, delivery retries, and per-order success rate.
- Made architecture decisions and designed the data model for the order and payment flow. Ensured delivery quality through unit testing and production deployment support.

Software Developer Jan 2020 – Oct 2021

Idukay | Quito, Ecuador

- Integrated a professional training platform (MERN) with the web services of the SRI, Ecuador's tax authority, for electronic invoicing: XML invoice generation, status and error handling, and automatic delivery to users, processing **60–70 invoices per month**.
- Built the reporting module end to end, with backend and React frontend, for **~50 students and 8 courses**: progress, grades, and pass rates per course for instructors and administrators, plus a progress map for students. Tested critical logic with Jest.

EDUCATION

Entrepreneurship & Innovation Program and LeapIN Business Accelerator Apr 2025 – Aug 2025

Fanshawe College | London, ON, Canada

- Developed a startup project from concept to prototype with mentorship from industry experts.

Diploma, Internet Applications and Web Development Sep 2023 – Apr 2025

Fanshawe College | London, ON, Canada

Full Stack Developer with JavaScript · React Front-end Developer 2019 – 2023

Platzi | Online

LANGUAGES

Spanish: Native · **English:** Professional
